1 Momentum

Momentum, in this sense, is a vector that can be calculated by multiplying the mass of an object with its velocity (which is also a vector and the reason momentum is a vector as well). Its SI unit is kilogram meter per second, and it plays a crucial role in calculating the force from Newton ' s second

Some people think

momentum and kinetic

energy are the same.

Read Online 3 1

1 Momentum

They are both related to an object ' s velocity (or speed) and mass, but momentum is a vector quantity that describes the amount of mass in motion. Kinetic energy is a measure of an object ' s energy from motion, and is a scalar. Sometimes people think momentum is the same as force.

Package

R is non-singular and, hence, there exists a real

3×3 matrix R^{-1} which is the inverse of R . We need to demonstrate

that this inverse belongs also to $SO(3)$. Since $(R^T)^{-1} = (R^{-1})^T$ it follows

$(R^{-1})^T R^{-1} = (R^T)^{-1} R^{-1} = (R^T R)^{-1} = I^{-1} = I$ (5.12) which

implies $R^{-1} \in SO(3)$.
