Bioreactor scale up is a critical step in the production of therapeutic proteins such as monoclonal antibodies (MAbs). With the scale up criterion such as similar power input per volume or O 2 volumetric mass transfer coefficient (), adequate oxygen supply and cell growth can be largely achieved.However, CO 2 stripping in the growth phase is often inadequate.

Bioreactor scale-up is a critical step in the production of therapeutic proteins such as monoclonal antibodies (MAbs). With the scale-up criterion such as similar power input per volume or O 2 volumetric mass transfer coefficient (kLa), adequate oxygen supply and cell growth can be largely achieved. However, CO 2 stripping in the growth phase is often inadequate.
