This shift is encouraging telcos and ISPs across the globe to upgrade their networks using optical fiber (FTTx). While optical fiber is the preferred option for providing broadband services, high speed Wireless Access (FWA) based on 4G/LTE and pre-5G technologies have also emerged as suitable alternatives in areas where fiber laying is difficult due to right-of-way issues or terrain limitations.

### Broadband Access Networks : Tejas Networks

In telecommunications, broadband is wide bandwidth data transmission which transports multiple signals and traffic types. The medium can be coaxial cable, optical fiber, radio or twisted pair.. In the context of Internet access, broadband is used to mean any high-speed Internet access that is always on and faster than dial-up access over traditional analog or ISDN PSTN services.
