Fundamentals of Rolling - 1st Edition

Concerning the rolling theory, the two-dimensional homogeneous theory and the two-dimensional inhomogeneous theory are explained. Concerning the flow stress, the equations of the low carbon steel and the stainless steel in cold sheet rolling and the equations of low carbon steel in hot sheet rolling are introduced.

Fundamentals Of Rolling - 1x1px.me

In metalworking, rolling is a metal forming process in which metal stock is passed through one or more pairs of rolls to reduce the thickness, to make the thickness uniform, and/or to impart a desired mechanical property. The concept is similar to the rolling of dough. Rolling is classified according to the temperature of the metal rolled. If the temperature of the metal is above its recrystallization temperature, then the process is known as hot rolling. If the temperature of the metal is below
