Chapter 8: Quadratic functions study guide. CHAPTER 8: QUADRATIC FUNCTIONS STUDY GUIDE. 8.1: IDENTIFYING QUADRATIC FUNCTIONS. A quadratic function is any function that can be written in the standard form = 2+ + . Quadratic functions can be identified as the SECOND DIFFERENCE in a table of values. The graph of a quadratic function is a curve called a PARABOLA.

Graphing Quadratic Equations. Using the Standard form Y=ax^2+bx+c it isn't that complicated to graph a quadratic function. Keep in mind when a is a negative number the parabola will open down, and when a is a positive number it will open upward. The first step when the quadratic equation is in standard form is to find the Axis of Symmetry by first using the formula X=-b/2a this is your axis of symmetry so that means it is the line that cuts your parabola in half.

Quadratic Formula and Functions Introduction. Greetings, mathronaut. We're heading back to the planet of the polynomials to take a closer look at a particularly fascinating subspecies of polynomial, the quadratics. By the time we're done, you'll know them inside and out: how to solve them, how to graph them, their likes and dislikes…you'll even be able to sniff them out when they're in disguise.
