"Brilliantly written, exhaustively

researched, beautifully produced, On Color is a tour-de-force, a creative feast for the eyes, mind, and heart. It not only delights and entertains, it will illuminate your understanding and appreciation of color. And that will enliven your life."—Jeffrey B. Rubin, Ph.D., Psychology Today

On Color | Yale University Press

Kastan and Farthing's On Color manages to be both provocative and playful, able to move from Bertrand Russell to "The Dress" of internet fame with intellectual dexterity and wit. And the book is not only a great read:

the edition from Yale is beautifully
designed, presenting its own feast of color
from the dust jacket to the pastedowns and
photos within.

On Color - Kindle edition by Kastan, David, Farthing ...

On Color, by Kastan and Farthing, is a
charming little book that, like color itself,
is hard to pin down with any sense of
clarity. Just as we can never know what
purple looks like to another person, On Color
will mean different things to different
readers.

Color is a powerful communication tool and can be used to signal action, influence mood, and even influence physiological reactions. Certain colors have been associated with increased blood pressure, increased metabolism, and eyestrain.

Colour, also spelled color, the aspect of any object that may be described in terms of hue,

lightness, and saturation. In physics, colour is associated specifically with electromagnetic radiation of a certain range of wavelengths visible to the human eye. Radiation of such wavelengths constitutes that portion of the electromagnetic spectrum known as the visible spectrum—i.e., light.

The following is a list of colors.A number of the color swatches below are taken from domain-specific naming schemes such as X11 or HTML4. RGB values are given for each swatch because such standards are defined in terms of the sRGB color space.It is not possible to accurately convert many of these swatches to CMYK values because of the differing gamuts

of the two spaces, but the color ...

ColorZilla - Chrome Web Store

Color, or colour, is the characteristic of visual perception described through color categories, with names such as red, orange, yellow, green, blue, or purple. This perception of color derives from the stimulation of photoreceptor cells by

electromagnetic radiation. Color categories
and physical specifications of color are
associated with objects through the
wavelengths of the light that is reflected
from them and their intensities. This
reflection is governed by the object's
physical propertie
