from the temporal fossa and from the deep surface of the temporal fascia. Its fibers converge inferiorly to form the tendon, which passes deep to the zygomatic arch and inserts into the medial surface of the coronoid process. The flap can be raised up and pedicled only on the coronoid process.

Temporalis muscle and fascia flap in treatment of TMJ ...

Introduction. The temporalis muscle flap has limited utility in the routine reconstruction of head and neck defects. The use of this flap has been commonly associated with the reconstruction of maxillectomy defects. The use of the temporalis for these defects has significantly diminished over the past two decades as the role of microvascular flaps have become the mainstay for reconstruction of maxillectomy defects.

## Pocket Dentistry

Because of its unique blood supply, the temporal area provides a tripartite system of flaps for reconstruction. Two of these, the temporoparietal (TP) fascia and temporalis flaps, are most commonly used for reconstructing defects in the head and neck because of their proximity, reliability, and adaptability. Both are described here, including their indications, anatomy, and flap-harvesting technique, along with contraindications and potential complications.

Flaps in Head and Neck . . .

The temporalis muscle flap is a versatile and reliable myofascial regional flap that can be used for reconstruction of many craniofacial defects due to its close vicinity to the orbit, oral cavity, and anterior and lateral skull base.

Temporalis muscle flap -  
ScienceDirect

Temporalis muscle and fascia have been the most commonly used flap to provide a soft tissue interposition in gap arthroplasty, as well as in cases of TMJ reconstruction.  
76 The flap is inferiorly

Temporalis Muscle and Fascia  
Flap in Treatment of Tmj ...

Temporalis myofascial flap  
is a widely used material in  
interpositional  
arthroplasty. It has  
satisfactory results and  
fewer complications.  
However, an additional  
anchoring technique is  
proposed that can lead to a  
better result by preventing  
postoperative fibrous  
adhesions or reankylosis

# Get Free Temporalis Muscle And Fascia Flap In Treatment Of Traj Ankylosis from flap dislocation due to instability.

## Treatment of Temporomandibular Joint Reankylosis by ...

Starting from the top edge of the temporalis muscle, the flap is elevated off the skull, below to the zygomatic arch. To replace the missing temporalis muscle, placing either acellular dermis or abdominal fat and suturing it to the adjacent muscle will recreate the temporal contour.
